Description:

Creative Solar USA is dedicated to professional solar PV system installations, utilizing a full team of NABCEP Certified installers, System Designers and licensed Electrical Professionals. Creative Solar USA, Inc. is a turn-key provider of solar development and installation services. Our comprehensive project approach begins with your solar feasibility assessment and is complete when your grid-tied or off-grid system is producing energy. We work closely with you to ensure that the coordination of engineering, materials, and on-site installation services meet and exceed the original financial and power generation objectives. Although the typical solar installation is categorized into roof-mounted, ground-mounted, and parking canopy-mounted, we don't subscribe to the idea that there are the only three installation possibilities. We think innovatively about next-generation solar solutions, and development of creative solar solutions is what sets us apart from other traditional solar companies. Our philosophy is underscored by our commitment to source the best solar materials, and to use the latest and best industry installation practices to customize solutions unique to your needs.
